Yeah, the logic is broken for domestic right now. I'm afraid you'll need to stick to international databases (or maybe preview invoices on domestic?) until it gets fixed.

Looks like Miriam B moved around where we perform that check and didn't test it thoroughly enough. That should be a QA item to her to fix.

I'm looking to see if there's a workaround in the meantime, I'll let you know.

Someone else had some trouble with the security on that window. Do you have all rights checked?

Yep. I ran the same invoice on both of the IG's. Get the error on the new one.

Hmmm, I'm not able to repro this. What exactly are you doing? Does it happen when you click the run button? What criteria?

I'm getting this trying to run the IG on the new .net IG. Is anyone around to tell me what I need to set up?
